instead of "hoping" to find the correct size of pants on the rack, one can simply order through the catalog department — which is fine. One must pay the transportation & handling but it is worth it to be able to get one's exact size.

On the wrong person & inappropriately presented, these pants appear very "low"; on SRP they are elegance itself.

The khaki "work pants" (so-called) are my teaching pants — When properly worn and with the appropriate presentation, these pants are as formal as if they had satin stripes on the seams.

K. — advanced placement English 12 — 106

---

Clearly she has this very very easy schedule because of the fact that her husband is the assistant Principal (or at any rate, has some sort of "special"). As a citizen it makes me mad. As a substitute teacher it makes me very happy — I shall have an easy day.

What a travesty — she spends her entire day doing practically nothing. She teaches three — possibly four — classes and that's that. The rest of the time she sits on her ass and does nothing. Is it any wonder that the quality of the students who graduate from this school is what it is.

---

Paul Kazmarick called me this morning at about 6:20 A.M. about five minutes later, the phone rang again. (Who was it: Lakeland or Forest City? My heart is at Lakeland.

Morning — cold weather routine: Day 2 of my new routine: wake up & turn on the oil heater 5 min. getting out of bed; about ten minutes later, when the tent is warm inside, turn off the electric blanket and get up. Put away, in the wicker basket in the NE corner, the controls & the electric blanket & replace the telephone on the blanket chest outside the tent. Into the foyer, where I fill up the electric kettle with water. Brush teeth — a glass of water takes care of the tooth brushing operation. The final rinsing and cleaning of the brush take place out on the stones in front of the building, and the waste water is disposed of from the stone step. Then it's "out back" — the shovel is in the "polaroo Bondolfo" — out into the woodland & go & dig a small hole — (waste elimination) that place of my bathroom chores concluded, & fill in the hole and return to the foyer — Usually the water is boiling by this time, and I pour the boiling water into a large basin & dilute it a little with cold water. Take warm basin into tent. Wash face and upper torso, wash below the waist (Waist taken down) and pour out the waste water in front of the building. The whole process takes about 30 minutes. Very thorough / satisfying and water efficient. How the tent has simplified things!
